The K30 formula is readily absorbed and applications are advisable when plants particularly need potassium.

Potassium disorders are manifested by wide spread chlorosis due to a decrease in Beta Chlorophyll rate, marginal yellowing of adult leaves followed by necrosis and stunted growth with appearance of brown necrotic spots.

The K30 formulation encourages carbohydrate accumulation (improving sugar, starch and oil content), it increases plants' resistance to diseases and adverse climatic conditions, it stimulates development of "mechanical tissues", it affects transpiration process thus regulating water balance, it enhances fruit preservability, it intensifies flower and fruit coloration.

Treatment with Liquid Potassium K30 should start from

first growth stages as it encourages a balanced nitrogen absorption.

Combining Liquid Phosphorous P15 with Liquid Potassium K30 in foliar fertilisation & fertigation, has a direct benefit on fruit setting and promotes an increase in crop growth and development from the mid to final stages. K30 can be mixed with other LFS products.

FERTIGATION - Period, Doses and instructions of use

Dose   **8-10L/ha diluted in 200L of water**

CROP	APPLICATION PERIOD
Pear, Apple, Peach, Apricot	From fruit set up to the pre-harvesting stage
Plum, Olive, Vine Strawberries	After flowering until harvest
Citrus	During the final stages before stasis
Open field vegetables	From ripened fruit up to harvest
Ornamental and flowering plants, lawns	In the final stages of the cultivation cycle

LEAF APPLICATION - Period, Doses and instructions of use

Dose   **300 - 400ml / 100L of water**

CROP	APPLICATION PERIOD
Pear, Apple, Peach, Plum Apricot, Olive, Vine Berries	From flowering up to ripening
Citrus	From fruit swelling onwards
Strawberries	After flowering until harvest
Arboreal plants in general	From the summer stasis
Open field vegetables	From the growth stage onwards
Ornamental and flowering plants, lawns	During the final stages of the cultivation cycle
Nursery Plants	Before the winter stasis
Herbaceous in general	From growth stage up to pre-harvesting period
Fodder, cereal, industrial crops	From growth stage up to pre-harvesting period

COMPOSITION
Guaranteed Analysis w/v

Potassium as Potassium Oxide 30%
Ureic Nitrogen 3%
K30 Liquid Potassium is a potassium oxide liquid EC fertilizer (does not contain chlorides, sulphates and nitrates). It can be used in fertigation and foliar fertilization.

WARNING

This formulation can be mixed with insecticides. When mixing with our K30 Liquid Potassium wear protective glasses, gloves & clothing.

Before spraying crop, test with insecticides on a few plants for phytotoxicity

Best to apply in the coolest hours of the day. Do not apply via foliar and fertigation if the electrical conductivity of the soil exceeds 1.0. Ensure the soil is moist prior to foliar / fertigation applications.

Do not use on NFT hydroponic crops. Do not mix with fungicides, calcium and sulphur products.

This product is irritating to eyes, skin and respiratory system, avoid direct contact with eyes and skin. In case of contact with eyes and skin, rinse immediately with plenty of water and seek medical advice. If swallowed, seek medical advice immediately and show container or label.

IRRITANT

Keep out of reach of children and pets.
